What does "crack" mean here? Is it something like a "crack-free" version? Does this mean that a crack is going to be released so that the full version can be cracked? A: Yes, "crack" is the process of finding a way into a program and then installing it as though it were the full version (thereby putting the program into "crack" mode, where it behaves like a free version, although it is not free in terms of cost or legality). A: I don't think it's a malicious thing in this context. It probably means cracked. The person who cracked it wasn't bothering to pay the money for the full version, so the crackers just installed it instead.

Quality of care received by adult patients on a medical ward after an acute medical emergency: a randomized controlled trial. Quality-of-care concerns have emerged recently in health care and literature has suggested that the quality of care received by patients in hospitals is often less than expected. A randomized controlled trial was performed to examine the effects of an intervention intended to improve the quality of care received by adult patients admitted to the medical wards of three hospitals in the Netherlands. A total of 568 patients were randomly allocated to a control group or a pilot-tested intervention group. Outcome was assessed by a patient questionnaire administered on discharge from hospital and by a medical doctor's notes and patient records. Quality-of-care scores were statistically significantly higher for the intervention group compared to the control group. The intervention reduced the percentage of patients having difficulties in one or more items of the EQ5D scale. The intervention increased the percentage of patients who received good quality of care. Effects on quality of care and health-related outcomes cannot be exclusively attributed to a specific intervention. However, it is possible that the intervention will have additional effects on the perceived quality of care. Which is more important? Don't know? Worse? Better? Stronger? Easier? Harder? It was the question I grappled with when I interviewed Abby White, one of last year's winners in our Enchanted September campaign. Abby's goal for September was "to be more patient in everyday life" and it was a phrase I heard again and again in the interviews I conducted for our campaign. This year, we're asking you to do the same. Think about the goals you've set for yourself and the life you'd like to live. If 2d92ce491b
